

Control Panels

Your controlling partner!

Engineering

Engineering is done in-house, so your wishes and requirements are directed straight to the responsible person. With our engineering department all your specific wishes/requirements are discussed before starting production. In this way we offer short communication lines, resulting in less possible errors.

Product range

All panels are engineered, constructed and commissioned according to our "Custom made" principle. Due to our extensive experience in the field of panel construction, we are capable of offering a product range varying from a one switch panel to complex PLC, PC or touch screen controlled panels.

Our standard product line consists of Mitsubishi A-series PLC and Moeller switchgear. However other brands are known to us and are therefore easily implemented in the panel required.

Production

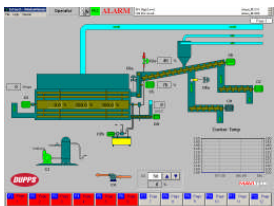

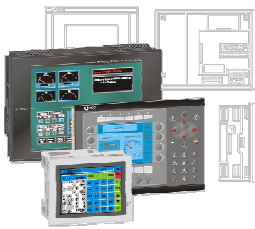

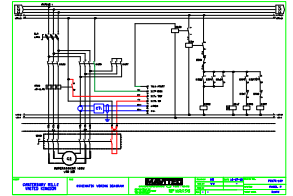

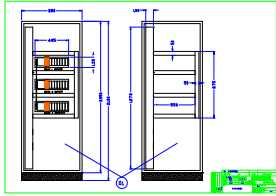

Due to the fact that we build all panels in-house, we keep a constant quality check of the components used and are capable of using the latest available technologies. All panels are standard constructed according European (IEC) and Dutch (NEN) regulations. Also specific country requirements/regulations can be implemented. In this way we offer a product that fully satisfies country/customer needs.

Visualisation

As Intouch Wonderware software partner for many years we are capable of offering you a complete visualisation of your process in the touchscreen and/or PC control. All this is done in-house and can easily be specified to customer wishes.

Service

Our panel constructors are available 24 hours/day. This way we offer you a problemfree operation of the supplied equipment.
